

Partner Solution Brief

Expand Your Project Management Capabilities and Collaboration with Spectrum and Procore Technologies, Inc.

+ OVERVIEW

Dexter + Chaney and Procore Technologies, Inc. have partnered to create the construction industry's most comprehensive solution for total job management. Jointly designed and developed, the two companies have created a bi-directional integration that allows project and financial data to flow between the two cloud-based construction management systems.

The Procore integration will complement and expand the existing project management features in Dexter + Chaney's Spectrum® Construction Software. Spectrum users can now take advantage of Procore's powerful suite of project management tools for project documentation and collaboration.

+ Added Project Management Power

Like Spectrum, Procore is a cloud-based solution, expanding accessibility wherever work takes you, yet is simple to use with its browser-based interface. Procore's project management platform helps you increase your project efficiency and accountability by providing streamlined project communication, collaboration, and documentation. Using its award-winning suite of project management tools, hundreds of thousands of registered Procore users manage all types of construction projects including industrial plants, office buildings, apartment complexes, university facilities, retail centers, and more.

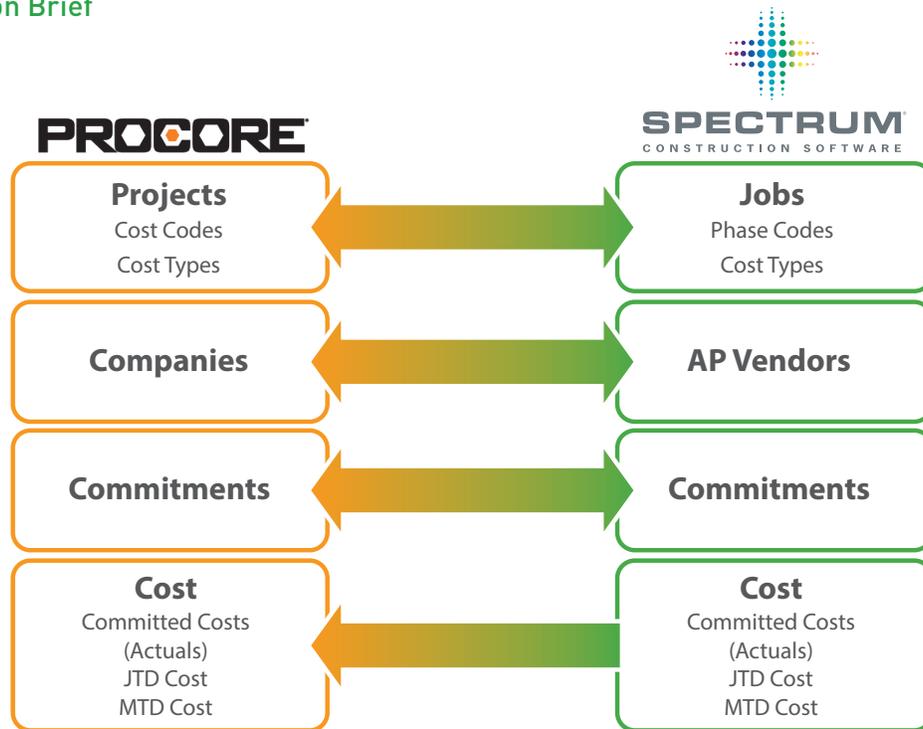

From selecting vendors to punching out your projects, Procore offers contractors a comprehensive project management platform. Procore's financial, field, document management, and mobile tools are used on projects of all sizes to ensure efficiency, mitigate risk, and increase profits. With a focus on creating collaborative project management environments, Procore automates your project management tasks and creates a central hub for real time project information.

+ Seamless Integration

A seamless, bi-directional integration between Spectrum and Procore allows project managers and construction operations professionals to complete work in Procore's web-based platform by collaborating on projects and using various interactive documents, including submittals, RFIs, contracts, schedules, and drawings. As work is completed, the integration with Dexter + Chaney allows your data to flow into Spectrum for real-time job costing and complete financial reporting.

Partner Solution Brief

Features

The bi-directional integration allows Spectrum users to realize the full features of Procore's all-in-one project management platform, including:

- + A complete, collaborative toolset to manage all project management functions and documentation
- + Syncing companies in Procore with AP vendors in Spectrum
- + Syncing budgets in Procore with cost estimates in Spectrum
- + Syncing cost codes and categories in Procore with job phase codes and cost types in Spectrum
- + Syncing commitments and job costs between both systems

Benefits

When using Spectrum and Procore together you can:

- + Avoid errors and dual entry with synchronized project cost data
- + Maintain accurate and secure financial data in Procore
- + Access real-time financial information from Spectrum
- + Forecast confidently from the field
- + Solve communication issues between accounting and project managers
- + Increase project productivity and eliminate delays
- + Realize better bottom lines for projects
- + Give accounting full control of data pushed into Spectrum
